What should be checked when the owner and the employee see different services in ePoreznoj?

For: Paušalni obrt · Obrtnici · j.d.o.o. · d.o.o.

Verified by an official source · Reviewed: 2026-11-22

Applicability: Access to the microcomputer from the date published in the Tax Administration notice.

Check who is logged in, on behalf of which business entity, and whether they have authorisation for the required service. From 1 January 2027, when using MIKROeRAČUNA, additionally verify that the credential meets the minimum security level requirement.

When this is applied

Compare the certificate details with the provider's instructions and ePorezna. If multiple people are using the application, verify their individual authorisations as well.

What to do in practice

Record the exact message and time, then set up the credential or authorisation before the first invoice.

A business example

The owner's login is successful, but the employee only accesses the individual menu. The owner checks which account the employee used to log in and whether the authorisation corresponds to the intended purpose of use.

Specific next steps

1. Record the exact message and time, then set up the credential or authorisation before the first invoice.

Limits of application

Access to the microcomputer from the date published in the Tax Administration notice.
