How can I track actual time and labour costs on the platform?

For: Platformski radnik kod poslodavca · Platformski rad preko vlastitog obrta

Practical business guidance · Reviewed: 2026-11-16

Applicability: Practical application according to the circumstances of the business

Separate engagement time, waiting time and costs from the number of tasks completed. The records help compare periods on the same basis.

What does that mean in practice?

For personal assessment, use a consistent period and the same definition of hours. Net pay, turnover and platform payouts are not the same metric.

This overview is for organisational and cost-effectiveness purposes. It does not set statutory working hours nor does it replace the employer's official records or business books.

An example from everyday business

The delivery driver's analysis also includes the waiting time between tasks, giving a more realistic personal indicator of income per hour invested.

Specific next steps

1. Record the start, end and breaks in work.
2. Separate the receipts or payment from fees and your own expenses.
3. Compare multiple periods before changing the schedule.

Most common mistakes

• Divide the gross turnover only by the minutes of active delivery.

• Comparing a worker and a sole trader without distinguishing their statuses.

Limits of application

Editorial business guideline. The example is illustrative; it is not a legal, tax or accounting calculation.
