What spare parts should I carry for repairing my own delivery vehicle?

For: Platformski radnik kod poslodavca · Platformski rad preko vlastitog obrta

Practical business guidance · Reviewed: 2026-11-22

Applicability: For comparing income and expenses. Wage calculations and self-employment liabilities should be treated separately.

Calculate maintenance costs per kilometre or per working hour, based on the level of servicing you actually require. Set aside a reserve for major breakdowns, separate from running costs and routine servicing.

When this is applied

Record the expected annual vehicle costs and the kilometres that give rise to wear and tear. If you use the vehicle for both private and business purposes, the business model precisely separates the usage.

What to do in practice

Once a month, compare the reserve with the accounts and adjust the cost per kilometre.

A business example

Tyres, servicing and minor repairs are expected to cost €480 for 6,000 km. The labour estimate of €0.08 per km for these items remains separate from fuel.

Specific next steps

1. Once a month, compare the reserve with the accounts and adjust the cost per kilometre.

Limits of application

For comparing income and expenses. Wage calculations and self-employment liabilities should be treated separately.
