MICROCOMPUTER from 2027: do I need a new login?

For: Paušalni obrt · Obrtnici · Platformski rad preko vlastitog obrta

Verified by an official source · Reviewed: 2026-11-16

Applicability: 1 January 2027 · implementation announced in a Tax Administration announcement

From 1 January 2027, a credential of at least the minimum security level will be required for MIKROeRAČUN. If you are already using a significant or high level, you do not need a new one because of this change.

What does that mean in practice?

The Tax Administration announced this change on 13 November 2026. Check your level of access before the implementation date, rather than waiting for your first bill in January.

Verification of credentials is separate from verifying who is authorised to work for your business entity. Do not accept someone else's personal credentials: use the prescribed authorisation system.

An example from everyday business

The tradesperson logging in with a low-level credential checks upgrade options with their issuer. The accountant works via their own access and appropriate authorisation.

Specific next steps

1. Check the level of the credential you are actually using to log in.
2. If it is low, ensure in good time that the issuer provides a significant or high level.
3. Check the necessary authorisations in ePorez with the accountant separately.

Most common mistakes

• Replace a personal credential with authorisation for another entity.

• To conclude that everyone must obtain a new credential.

Limits of application

The scope refers to access to the MICROCOMPUTER. Please check the terms of other services and authorisations separately.
