AI data extraction from invoices · How to verify it with an example?

For: Paušalni obrt · Obrtnici · j.d.o.o. · d.o.o.

Practical business guidance · Reviewed: 2026-11-22

Applicability: According to the profile and circumstances of the described case.

Compare the total amounts to the invoice before sending it to accounting.

Checking by example

Define fields such as amount, currency, reference and supplier with input from an authorised source.

Preserve the link between the extracted data and its original location in the document.

Working example · AI data extraction from invoices

Preserve the link between the extracted data and its original location in the document. If a number is unreadable, use manual markup and request a better correction.

Specific next steps

1. Define fields such as amount, currency, reference and supplier with input from an authorised source.
2. Preserve the link between the extracted data and its original location in the document.
3. When a number is illegible, use manual marking and request a better correction.

Limits of application

Apply the guideline to your documents and working methods.
